WEATHER SYNOPSIS BY REGION

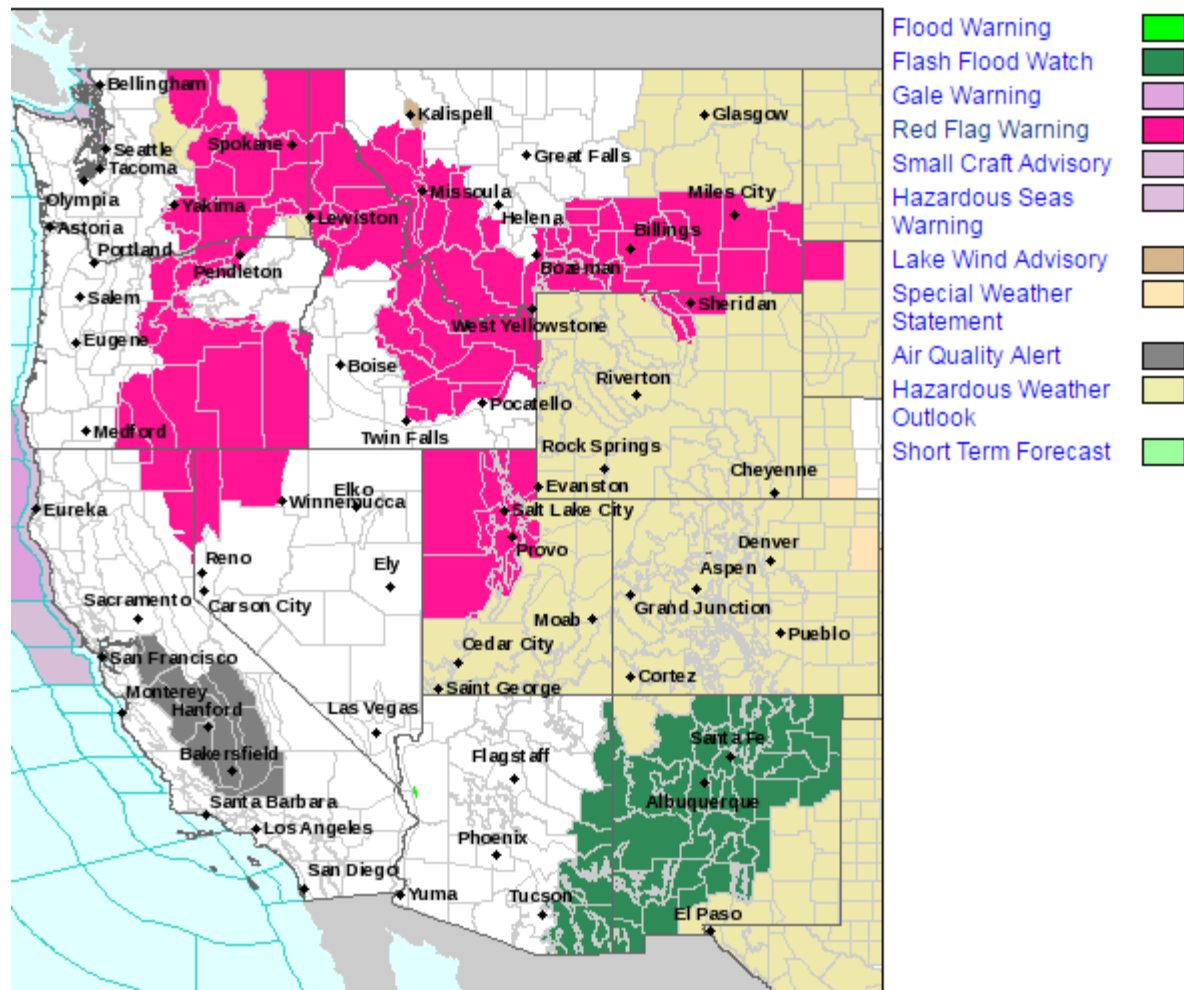

NORTHERN CALIFORNIA

A low pressure trough over the Pacific Northwest will continue to deepen today, then move east on Tuesday. The West South Westerly flow associated with the trough will keep moist unstable conditions and thunderstorm chances east and southeast of Northern California. Temperatures will be near normal. Minimum RH will be 5-15% east of the Cascade-Sierra crest and 10-20% in inland areas west of the crest. Many inland areas will continue to see humidity only recover to 25-40% overnight. Afternoon southwest to west winds will increase to 15-20 mph with gusts to 35 mph today, and further increase Tuesday to 15-25 mph with gusts to 35-40 mph as the trough passes. In the East Side PSA (NC08) these winds will be on top of areas where scattered lightning strikes occurred Thursday through Saturday and where holdover ignitions may still exist. This situation is considered a High Risk for significant fire development. The dry and breezy conditions in the northeast portion of California and Northern Sierra PSAs will fall just below High Risk criteria today and Tuesday. Light north to northeast downslope surface winds are expected in and around the Sacramento Valley early Wednesday. Wednesday afternoon will be a bit warmer with lighter winds as a small-scale high pressure ridge passes overhead. On Thursday another trough will approach the coast. There is a possibility that this trough will pull subtropical moisture northward into our eastern and northern areas and produce isolated thunderstorms late Thursday through Saturday and another low pressure trough may produce isolated lightning on Sunday.

SOUTHERN CALIFORNIA

Southeast flow aloft will bring scattered afternoon showers and thunderstorms to the mountains and deserts of Southern California south and east of I-15 through Wednesday. Isolated showers and thunderstorms will also occur over Central California from the Sierra Crest eastward this afternoon. High pressure aloft currently located over Southern Nevada will bring near to a little above normal temperatures through Wednesday, with 80s to low 90s across the mountains and 90s to 102 in the valleys. Minimum humidity will be mainly between 15% and 30% today and then drop to the single digits and teens across Central California Tuesday and Wednesday. There will be strong and erratic winds in and near any thunderstorm that develops through Wednesday, otherwise winds will be normal for this time of year. A weak Pacific trough will move over the West Coast bringing a little below normal temperatures to the region Thursday through this weekend. This trough will also bring afternoon southwest to west winds of 15 to 25 mph with gusts to 40 mph to the mountain ridges and desert passes Thursday through this weekend. Minimum humidity will drop into the single digits and teens above and inland from the marine layer starting Thursday. The shower and thunderstorm threat will end across most of the region Thursday through this weekend, except they will continue near the Colorado River Thursday.
